Application for Web Developer | Hybrid

June 18, 2026

Dear PETNET Hiring Team,

I am excited to apply for the Web Developer | Hybrid position at PETNET, INC. With experience building full-stack web applications using React and Node.js, I am eager to contribute by creating APIs for both existing and new applications, integrating APIs, and creating database logic and incorporating business rules inside the application.

In my current role I create and integrate REST APIs that power real-time features in production React applications, while designing data models that implement business logic for multi-tenant platforms. I have delivered this work using Node.js, Express, MongoDB, and MySQL, always collaborating closely with teammates and maintaining clean GitHub-based workflows. These experiences directly align with the full stack requirements for the Web Developer role.

I bring a willingness to research and be trained, and I enjoy learning the codebase and improving my coding skills while working well in a team environment and in a fast-paced environment. I am fully prepared for the hybrid set-up (at least 2-3x a week onsite in Makati).

I am particularly drawn to the opportunity at PETNET because of your focus on Professional Growth: We foster a culture of continuous learning and personal development. As a recent Bachelor of Science in Computer Science graduate with honors, I am motivated to apply my skills in a mission-driven organization that empowers financial inclusion through technology.

Thank you for considering my application. I would welcome the opportunity to discuss how I can support PETNET's development team.

Best regards, Zen Andrei Obrero 09068575015 zenandreiobrero777@gmail.com <https://github.com/ZenDevvv> <https://zendev-portfolio.netlify.app/>
